Udemy Report Background:

The data collected provides insight into the patterns and trends of Udemy course subjects to understand where opportunities to increase quarterly revenue may lie. These findings seek to assess the suggestion that Web Development courses are the most popular courses offered by Udemy and that raising prices for these courses will increase the business's revenue.

Project Problem

- The business problem presented asks to understand which subject will increase quarterly earnings.
- There are 3 weeks to work on this project.
- The analysis requires the collection of data on current course revenue, data on courses from different topics to understand where opportunities to increase revenue may lie and track the performance of courses to understand this problem.
- To better understand the business problem, the following questions can help create a clearer analysis, "what are the most popular courses among learners and which courses are the highest earning?"

Design:

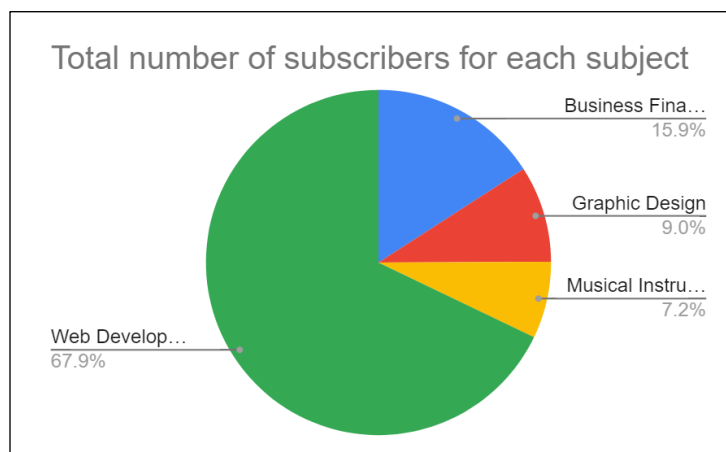

Cleaning the data:

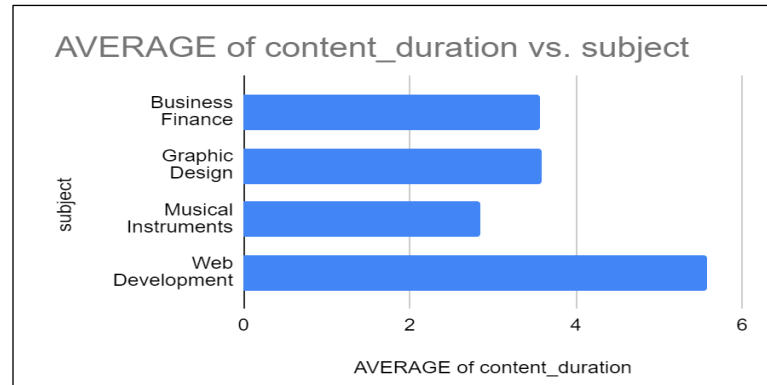

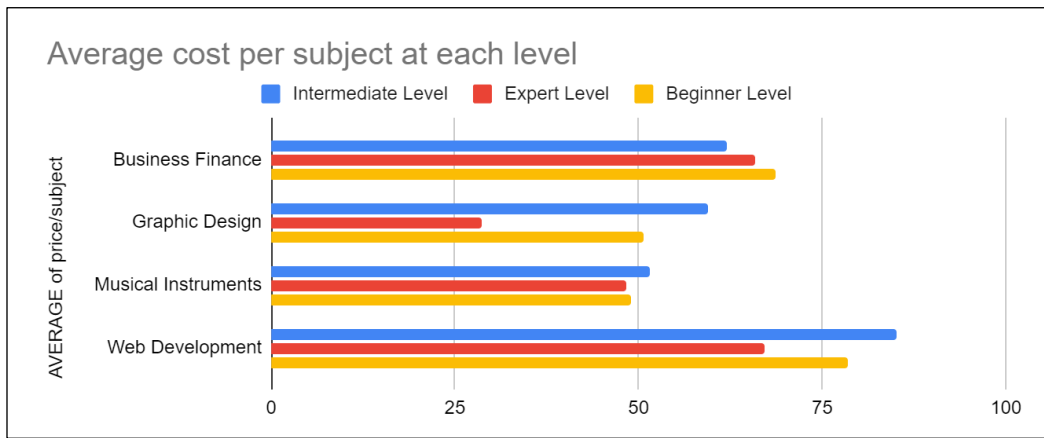

To clean the Udemy course data set, the duplicates and blank cells were removed, incorrect course titles along with corresponding web links were modified, headers were reformatted to match up, and the 'Web Development' subject title was formatted to be consistent with the other subject titles.

Visualizing the data:

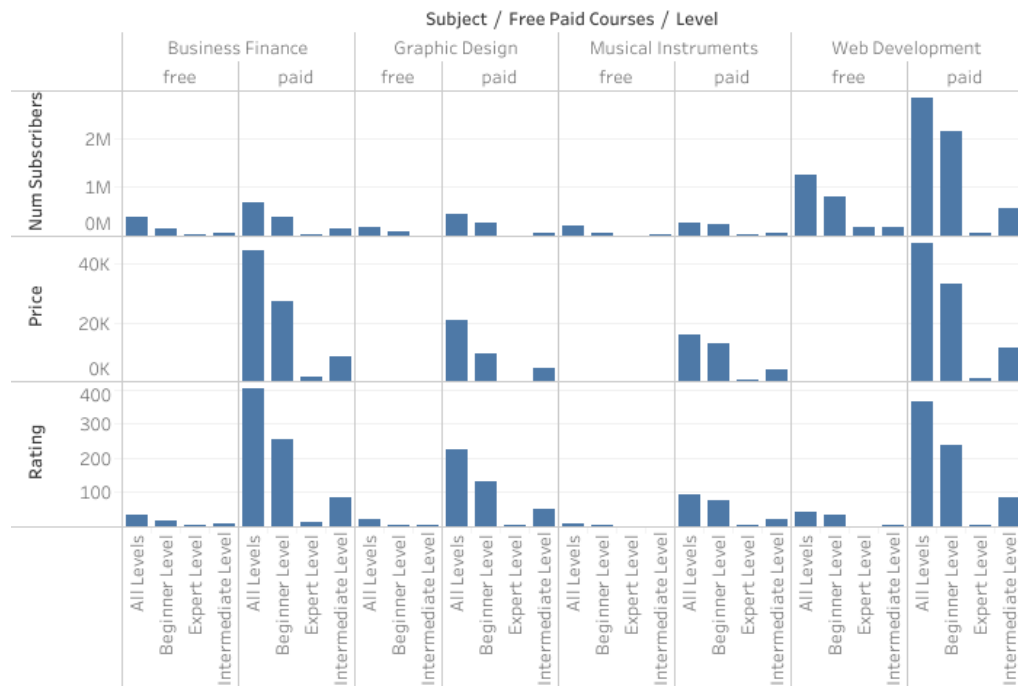

Google Sheets and Tableau were utilized to create pivot tables and charts to visualize trends across the Udemy course subjects.

Findings:

Total subscribers at all levels across all subjects who access free or paid content

Analysis:

The findings of this report indicate Web Development is the most popular subject on Udemy. The findings also demonstrate that Web Development and Business Finance subscribers pay for courses at about the same frequency followed by Musical Instruments and Graphic Design subscribers, respectively. Further analysis shows that Beginner Level subscribers are most willing to pay for courses across all four Udemy subjects, especially within the most popular subject Web Development.

Focusing on the root cause analysis of why Web Development is the most popular subject, we can see that subscribers are willing to pay for content that has a longer content duration and higher price point, indicating subscribers may perceive these courses to be of higher quality. Furthermore, it should be noted the findings emphasize the popularity of Beginner Level and Intermediate courses among Web Development courses may be attributed to the targeted interest of subscribers who wish to acquire the most in-demand job title and one of the top-paying jobs in tech. Users seeking to up learn and upskill using Udemy courses are motivated to pay for subject content that can lead to exponential career growth.

Conclusion:

Observations of the findings in this report show that raising course prices for Web Development courses would increase revenue based on the high number of subscribed users for these courses. As a result of external influences motivating demand for Web Development courses, an increase in subscribers can be anticipated for this subject. Raising prices for Web Development courses, especially among Beginner and Intermediate level courses which see the highest rate of users would significantly increase revenue for Udemy.

Based on this report endorses raising prices for Web Development courses.
